Abstract

Vocational Program Diploma IV Archive Open University – Indonesia, is an undergraduate equivalent vocational program. With 70% practice course composition and 30% archival theory is expected graduates of this vocational program can work professionally. But the concept of University distance education so positioned vocational programs that more students practice difficulties to achieve learning achievement, especially mastering the work practices that become peculiarities of this Diploma program. The research entitled "Professionalism Graduates of Vocational Programs With Student Involvement in Nationally Scaled Government Program" is a descriptive research with qualitative approach. The purpose of this research is to identify the concept of practice undertaken by students of Diploma IV Vocational Archive program so that the students have the ability to practice evenly wherever the students live. This is because the distribution of vocational students Diploma IV Archives Open University is in 40 UPBJJ/ regional office Open University, offices throughout Indonesia. Primary data is data from interviews with parties involved in the implementation process of practice, the local government or province, the central institution in this case is the Indonesian National Archive (ANRI). Secondary data in the form of documents related to research purposes. The results of data analysis obtained show the role of students of Diploma IV vocational program Archive in the entry material archives processed from the archive area included in the national archive network system is very influential on the ability of students to master the material or concept of archival science and theory maximum. In addition to practical experience on the involvement of students in the national work of the national archive network system, students feel proud or confident with the results of practice. Because the national archive network can be accessed by all people in Indonesia easily and quickly.

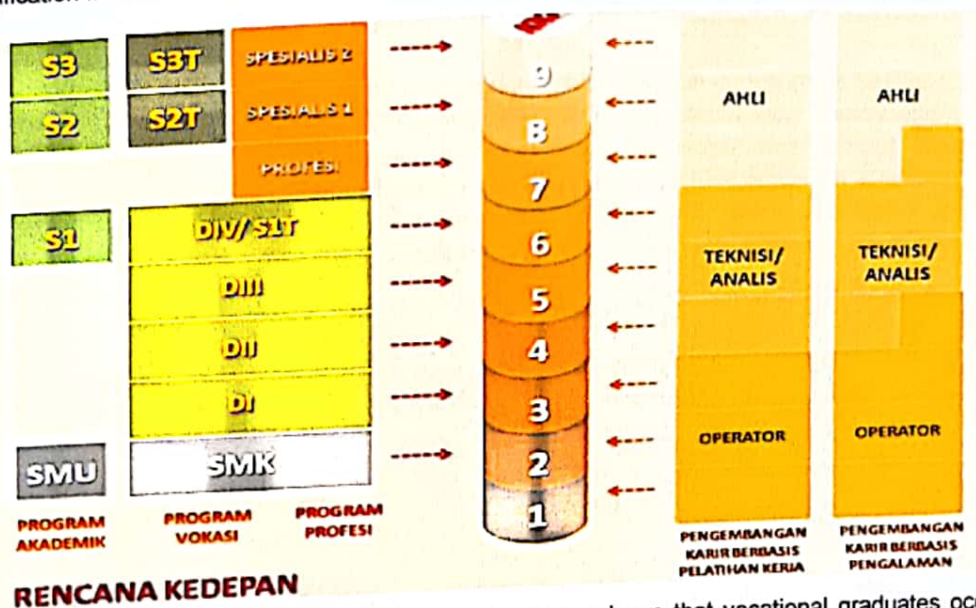

Keywords: Professional vocational archive program, national archive network.

1. INTRODUCTION

Open University as a distance education has different characteristics from conventional universities. The Open University in the learning process is divided between the teacher and students. To help students or students of the Open University have provided facilities in the form of non-printed teaching materials such as; television learning programs, radio learning programs, cai learning programs, dry lab learning programs. Increasing years and the development of the learning system at the Open

University which is increasingly advanced, the demand to organize study programs according to the needs in the community is increasing. Such as agricultural extension study programs, nurse study programs, visual communication design study programs, tourism study programs. For requests for professional-based study programs for example; library science study program, archival science study program.

In accordance with the regulations of the technology research department and the higher education department for study programs that are professionally based or vocational programs have a standard subject in the learning process that is 70% of practical courses and 30% of courses are supporting theories according to graduate competencies. While the curriculum is based on the national qualification framework standard in Indonesia (Indonesia Qualification Framework.)

The basis of the structure of the college graduates above shows that vocational graduates occupy level 6/7 of the system structure contained in the Indonesia Qualification Framework.).

As a college that uses a remote system, Open University which organizes professional programs or vocational programs must provide the ability to students who have practical elements.

2. FORMULATION OF THE PROBLEM

How do you graduate students in vocational programs so that they have superior abilities?

3. DISCUSSION

3.1. Diploma IV Science Study Program Open University Archives

Diploma IV Study Program The Open University Archive was opened in 2007. Open a diploma study program IV Archives due to requests from the Indonesian National Archivists (ANRI), because regional ANRI is on all islands in Indonesia, the Open University as the organizer of the archive diploma IV vocational study program is very appropriate. The diploma IV vocational study program consists of 37 subjects with a composition of 70% practice and 30% theory to support the achievement of the target graduates. In the final semester or 8th semester students must attend a technical internship program located at the provincial archives, district level or at the university

archives center. In the implementation of work practices students get guidance from the instructor, as well as companion archival work practices. Assessment categories are:

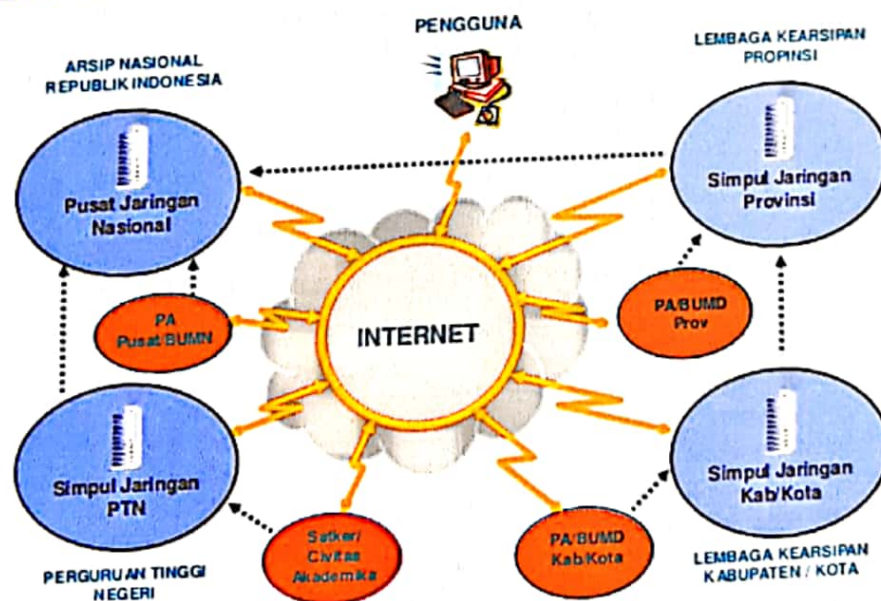

- Ability to master practical material
- The level of speed of completing practical material
- Diligent, disciplined

To further improve the ability to practice the diploma IV program, the archive will be carried out in collaboration with national quality Indonesia (ANRI), namely the contribution of students in the government program in the national archive Indonesia (ANRI) in the form of a network node system.

3.2. National Archive Network

The national archive node network is an archival integration system of institutions that exist throughout Indonesia. In this archive network include higher education institutions, local governments, museums, other public bodies. With this integrated archive network, the people in all islands in Indonesia can access archive information wherever the community is and what kind of archive is needed. With this integrated archive network, the public can access archive information data easily and quickly. Collaboration with national archive Indonesia (ANRI). The pictures regarding the national archive network are:

Source : <http://www.anri.go.id>

From the structure of the integrated national archive network, it can be seen that the incorporation of various institutions on the network node makes it easy for people to access archival data information.

Strength for students of diploma IV vocational program archive is the practice carried out in data entry archives in each institution that is integrated with network nodes. At the time the student practice the diploma IV vocational program did.

1. Identify the archive
2. Doing an archive description.
3. Entry of archives in the network node database
4. Evaluation by retrieving archival data information.

The above practices will make students of the IV diploma vocational program have superior knowledge, lots of experience and have practical competence. source.

3.3. Student involvement in the national archive network node

Students of the undergraduate archive study program take compulsory courses consisting of, classification courses, thesaurus, electronic archives, archive automation, and assessment and depreciation of archives. These five courses have the competence of students to be able to comprehensively archive practices. Includes manual archive management and electronic archive management. The five subjects that students have learned can be implemented in contributions at the national archive network node. This national archive node network provides information about history, photos of documents, research results, and other documents that have value for the benefit of the community and the country. The position of students involved in national projects in the field of archives is to add data, collection of information archives in the archive center in the district / city, provinces in the Indonesian state. This student contribution will increase the number of archival data in each region and add various kinds of information that is locally loaded in each region in Indonesia.

4. CONCLUSION

Students of the Diploma IV Open University Archives contribute to the national archive network, a national scope activity organized by the National Archives of the Republic of Indonesia. With the number of network nodes or nodes consisting of archive collections in each region or province

throughout Indonesia, it certainly provides a wealth of very special archive data, from units of quantity and quality units. With the national archive network as the only national archival network owned by Indonesia provides easy access for anyone who needs information from various archival data in all parts of Indonesia.

Student participation in Diploma IV vocational program at the Open University Archive is very helpful in increasing wealth, various types of archival data in the area. With this participation, Diploma IV Archives vocational students have carried out practical work practices on the science of archives as a practice. The student participation program in this network also improves the quality of competence for students.

The purpose of the national archive network will be quickly achieved if more and more parties are involved in increasing the amount of archival data on the network. With 40 regional offices in each province, in Indonesia diploma IV vocational students of the Open University archives are very special in increasing the number of archival data and collections in the national archive network.
